## TECHNICAL SKILLS

Programming: Java, Python (Flask), C | Web: HTML, CSS, JavaScript | Full Stack: MERN (MongoDB, Express.js, React.js, Node.js) | Database: SQL, MongoDB Atlas | Other: Data Structures (Intermediate)

## PROJECTS

- **FindNearPG – PG Locator Web App**
  - Technical Details: Developed using Python (Flask) for backend APIs, MongoDB Atlas for data storage, and HTML, CSS, JavaScript for a responsive frontend.
  - Responsibilities: Designed and implemented user authentication, integrated Google Maps API for location-based search, and developed contact functionality.
  - Results/Impact: Enabled users to find PG accommodations within seconds; improved user engagement through intuitive UI and real-time data updates.
  - Link: <https://findnearpg.onrender.com>
- **Voting Management System – Online Voting Platform**
  - Technical Details: Built with Python (Flask) backend, MongoDB Atlas database, and HTML, CSS, JavaScript for frontend; implemented secure login and single-vote validation.
  - Responsibilities: Led development of candidate registration module, created live results dashboard, and managed admin panel functionalities.
  - Results/Impact: Enhanced election transparency and security; supported 100+ concurrent users during mock elections with zero data breaches.
  - Link: <https://voting-management-system-ue47.onrender.com>
- **Shop4Grocery – MERN Full-Stack Application**
  - Technical Details: Utilised MongoDB, Express.js, React.js, and Node.js for a full-stack solution; implemented JWT-based authentication and RESTful APIs.
  - Responsibilities: Developed product catalogue, shopping cart, and order management modules; optimized frontend for seamless user experience.
  - Results/Impact: Reduced cart abandonment by 20% through streamlined checkout; managed 500+ product listings with real-time inventory updates.
